

Albinism Awareness Day

A rare non-communicable genetic disorder due to the absence of melanin pigment from the body
.It lasts a lifetime and does not get worse over time

Other names for the disease:

Leprosy - Albinia - Albin

- patients are pale
- Signs appear on skin, hair, and eye color, as they suffer permanent from visual impairment leading to disabilities and people can be affected to different degrees.
- People with albinism are more prone to skin cancer and sunburn
- There is no cure for albinism. A healthy lifestyle and the necessary steps are taken to protect the skin and enhance vision.
